— OPPORTUNITY READINESS PLATFORM FOR STUDENTS

From Apply Everywhere to Know Where You Fit.

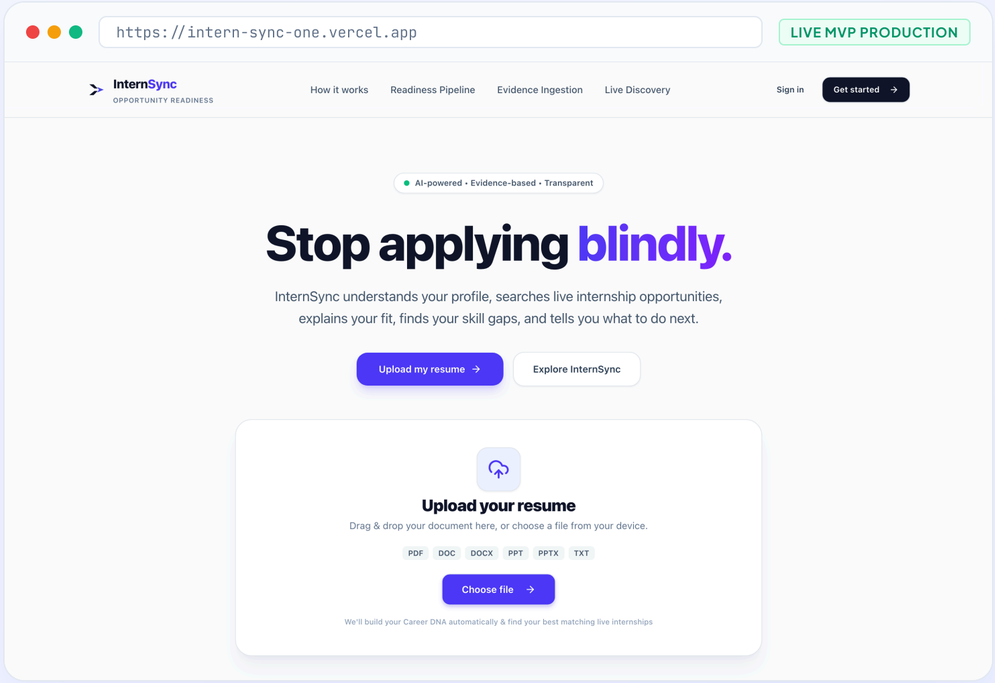

InternSync transforms the broken internship search from blind volume into strategic readiness. We index genuine vacancies across official applicant tracking systems (Greenhouse, Lever, Ashby), calculate explainable fit across 8 dimensions, and provide zero-fabrication resume tuning before you apply.

307+
VERIFIED LIVE VACANCIES

41
OFFICIAL ATS BOARD FEEDS

8-Factor
DETERMINISTIC SCORING

0%
FABRICATED DATA / PLACEHOLDERS

— THE STUDENT DILEMMA

The broken reality of the student internship journey.

Millions of ambitious college students follow the exact same painful script every recruitment season: send hundreds of blind resumes, face silent algorithmic rejections, and receive zero actionable feedback on what was actually missing.

The Mass Application Trap

Students apply to 50–100 generic listings across LinkedIn, Internshala, and portals using identical resumes. Because they lack eligibility visibility, over 85% of these submissions are automatically filtered by employer ATS systems without a human review.

Student Quote: "I applied to 80 internships last month. 3 rejected me automatically, and 77 never replied. I don't even know what I did wrong."

Opaque & Scraped Vacancies

Third-party job aggregators scrape stale listings, display expired deadlines, and redirect students through spam traps or dead links. Vacancy descriptions hide strict graduation year constraints inside walls of buzzword text.

Structural Waste: A 3rd-year student wastes hours tailoring an application for a role that strictly requires 2025 graduates available for immediate full-time conversion.

Zero Growth or Guidance

Existing platforms end at the "Submit Application" button. If a student is 70% ready for an internship at Notion or HackerRank, no tool tells them what specific 30% gap exists or how to bridge it before reapplying.

The Solution Need: An intelligent layer that evaluates readiness, pinpoints addressable gaps, and guides truthful preparation.

THE CORE PARADIGM SHIFT

The problem isn't finding more internships. It's making better internship decisions.

Aggregators assume that discovery is the bottleneck. In reality, students already have access to thousands of listings. The real bottleneck is decision clarity: knowing where you genuinely fit, where you need preparation, and where you should not apply.

LEGACY SEARCH ENGINE MODEL

"Passive Volume Matching"

- Treats all jobs as equal links in an endless infinite-scroll feed.
- Rely on shallow keyword matching (e.g. "React" appears in both resume and JD).
- Encourages "Quick Apply" spam that clogs company ATS systems.
- Leaves the student alone to decipher eligibility, compensation, and work mode.
- Treats rejection as a silent dead-end with zero growth feedback.

Result: High effort, low hit-rate, student fatigue, and noisy applicant pools for hiring managers.

INTERNSYNC READINESS MODEL

"Opportunity Readiness Engine"

- Ingests verified openings directly from authoritative ATS endpoints (Ashby, Greenhouse, Lever).
- Calculates deterministic 8-factor fit (Skills, Degree, Year, Projects, Location).
- Delivers clear tri-state decisions: **APPLY NOW**, **PREPARE FIRST**, or **SKIP**.
- Surfaces evidence-based reasoning: exactly what matches and what is missing.
- Provides truthful, zero-fabrication resume tuning and 14-day gap sprints.

Result: High-confidence applications, targeted skill growth, and verified talent pipelines for recruiters.

THE DIAGNOSTIC FRAMEWORK

The four structural gaps InternSync eliminates.

By dissecting the broken recruitment journey into four discrete failure points, InternSync systematically resolves the friction between student capability and real hiring criteria.

GAP 01

Discovery Gap

Students rely on stale aggregators with expired postings, broken redirects, and synthetic dummy vacancies.

InternSync Fix: Live querying of 41+ verified Greenhouse, Lever, and Ashby employer feeds with direct application links.

GAP 02

Understanding Gap

Job descriptions are dense with boilerplate, concealing mandatory graduation windows and prerequisite technical depth.

InternSync Fix: Deterministic extraction of core skills, eligible academic batches, duration, and verified stipends.

GAP 03

Readiness Gap

When skills don't match, students are given no roadmap to build capability, turning near-matches into wasted opportunities.

InternSync Fix: Automated 14-day study sprint roadmaps and Skill Lab baseline assessments for addressable gaps.

GAP 04

Decision Gap

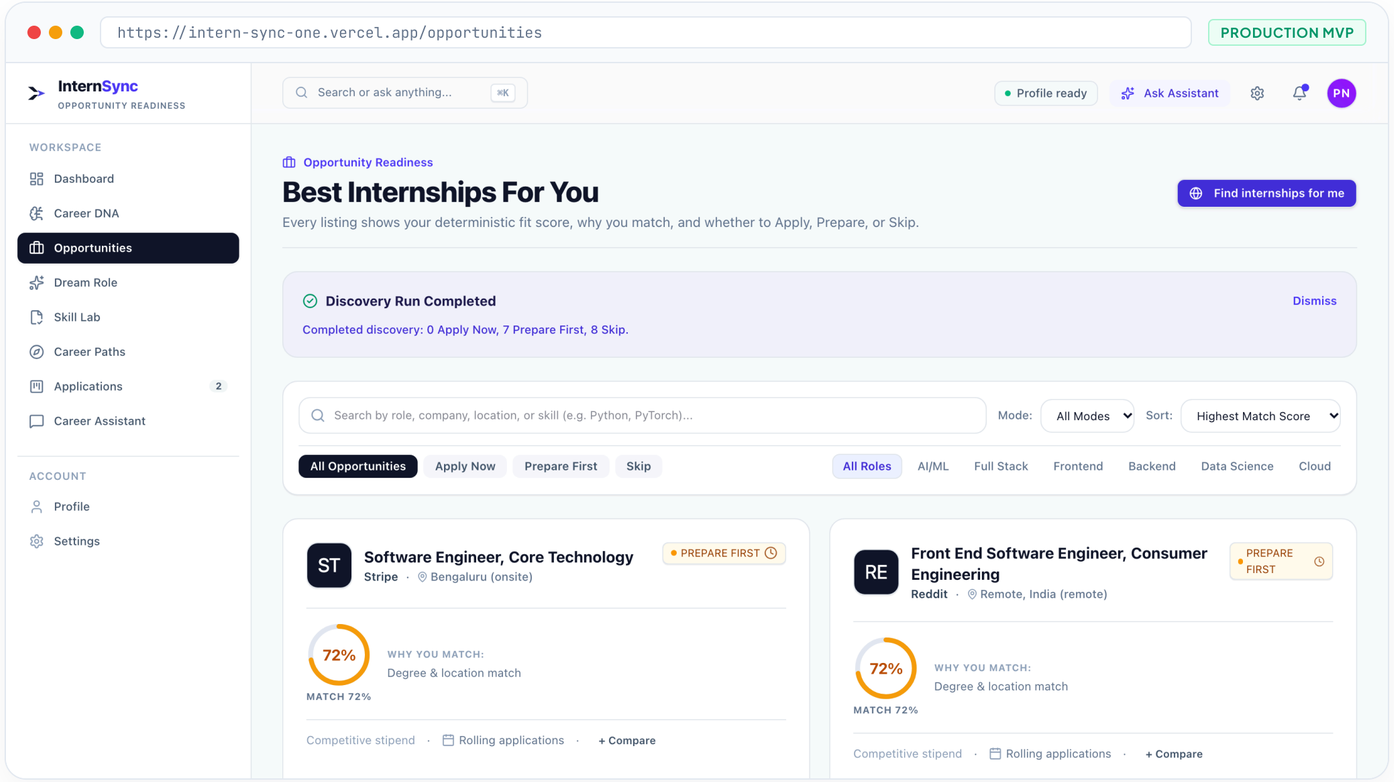

Every portal shows an undifferentiated "Apply" CTA, prompting uninformed submissions that fail ATS screening.

InternSync Fix: Explainable tri-state decision guidance: APPLY NOW, PREPARE FIRST, or SKIP with itemized evidence.

— THE VALUE PROPOSITION

Introducing InternSync: The Opportunity Readiness Platform.

InternSync bridges the chasm between student portfolios and employer criteria. We empower candidates to understand their fit before applying, sharpen their project bullets truthfully, and connect directly with official employer portals.

1. Understand Your Fit

Deterministic 8-factor evaluation maps technical skills, verified project repos, academic eligibility, and work arrangements against genuine vacancy criteria.

2. Improve Your Profile

Zero-fabrication Resume Intelligence refines existing project bullet points to highlight evidenced technologies, while 14-day sprints target prerequisite gaps.

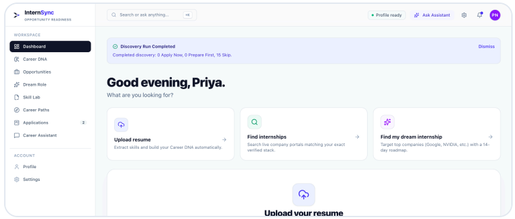

3. Find The Right Opportunity

Dynamic multi-source ATS discovery ingests over 307 verified vacancies across Ashby, Greenhouse, and Lever with direct, non-siloed external application links.

ECOSYSTEM ARCHITECTURE

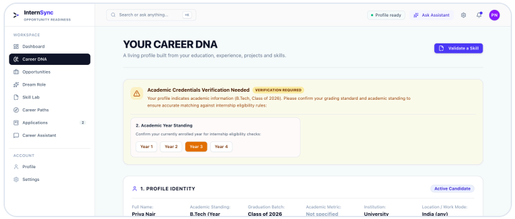

Four integrated workspaces built for candidate success.

InternSync is organized into four interconnected modules that guide students from initial profile extraction to verified job submission.

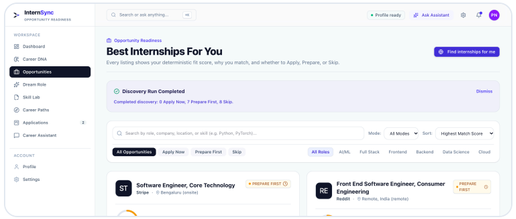

1. Student Dashboard

Real-time readiness metrics, upcoming deadlines, saved application pipeline status, and immediate action items.

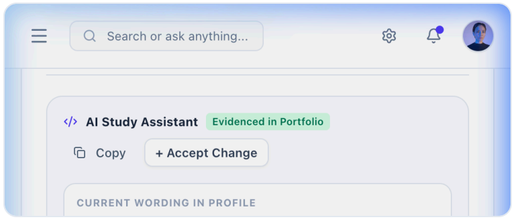

2. Career DNA Profile

Multi-factor capability profile linking confirmed skills with GitHub repos, deployment links, and coursework.

3. Multi-Source Discovery

Direct ATS ingestion across Ashby, Greenhouse, Lever with Research Preferences and 6-stage progressive stepper.

4. Resume Intelligence

Zero-fabrication bullet refinement, addressable skill gap analysis, and verified direct employer portal routing.

END-TO-END PIPELINE

The complete student journey: from resume to verified application.

A transparent, deterministic workflow engineered to protect student data, verify job opportunities, and ensure confident applications.

STEP 01

Upload & Confirm

Client-side parser extracts PDF/DOCX resume text into skills, projects, and academic batch.

STEP 02

Career DNA

Links verified GitHub repos, live deployments, and student career role preferences.

STEP 03

ATS Discovery

MultiSourceOpportunityEngine queries Ashby, Greenhouse, and Lever in parallel.

STEP 04

8-Factor Scoring

Deterministic matching calculates overall fit and tags Apply Now, Prepare First, or Skip.

STEP 05

Resume Tuning

Workspace refines bullets to highlight matching technologies without fabricating history.

STEP 06

Direct Apply

Routes student to official employer ATS portal and tracks status on Kanban board.

ZERO DATA TRAPS • ZERO PRIVATE KEY EXPOSURE

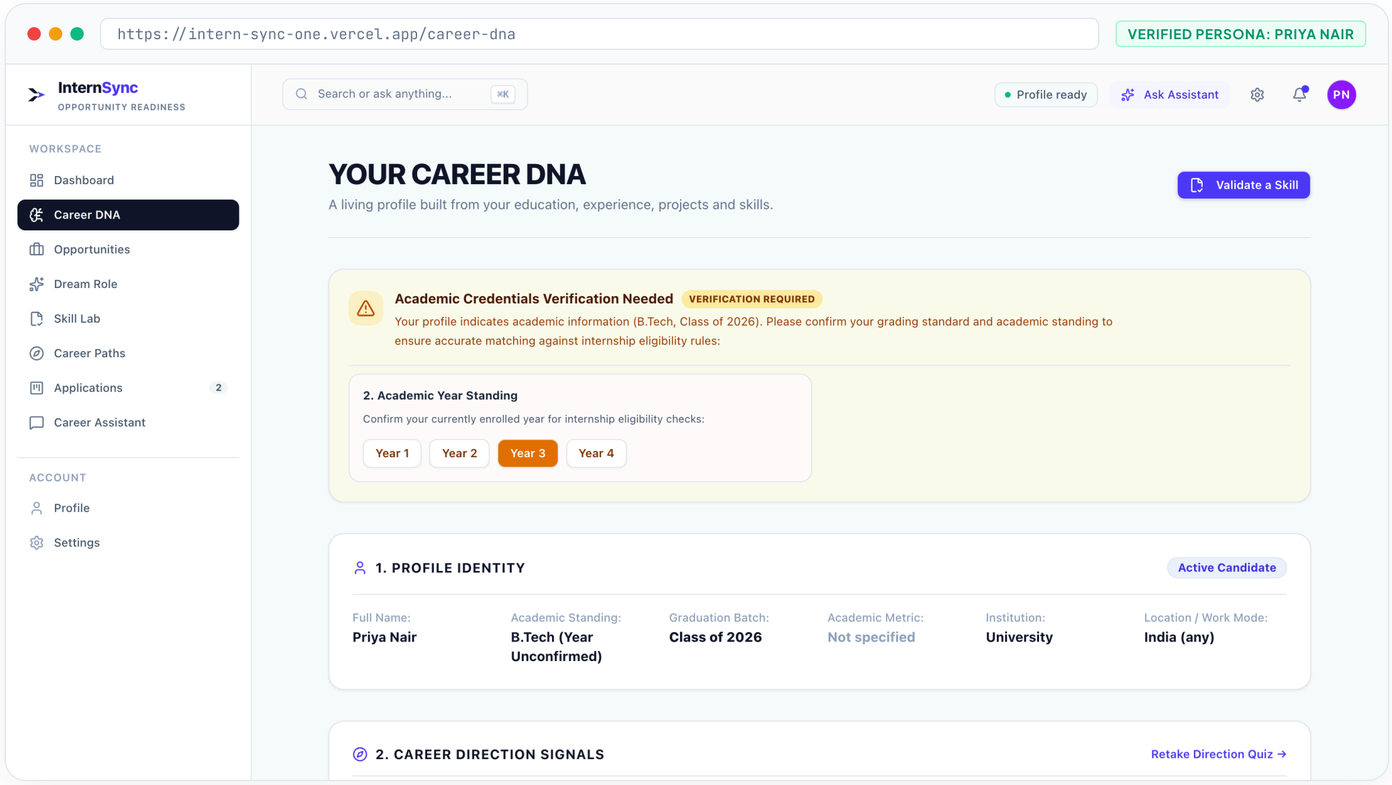

All AI search keys stay server-side behind Vercel edge functions. Applications are never trapped in an internal unmonitored silo.

SECURITY & PRIVACY VERIFIED

— RICH PROFILE SYNTHESIS

Beyond keyword resumes: Dynamic 8-factor Career DNA.

Static PDF resumes fail in modern hiring. InternSync parses resumes into an interactive, multi-dimensional capability model with verified project repositories and academic metrics.

Multi-Source Evidence Model

Skills are not merely accepted from text claims—they are substantiated by multiple corroborating evidence sources:

- **Resume Extraction:** Parses degree, graduation batch, university, and core language proficiencies.
- **Project Evidence:** Connects real GitHub repositories and live demo URLs to prove practical implementation.
- **Skill Lab Assessments:** Interactive quizzes calibrate baseline confidence scores from 0 to 100%.

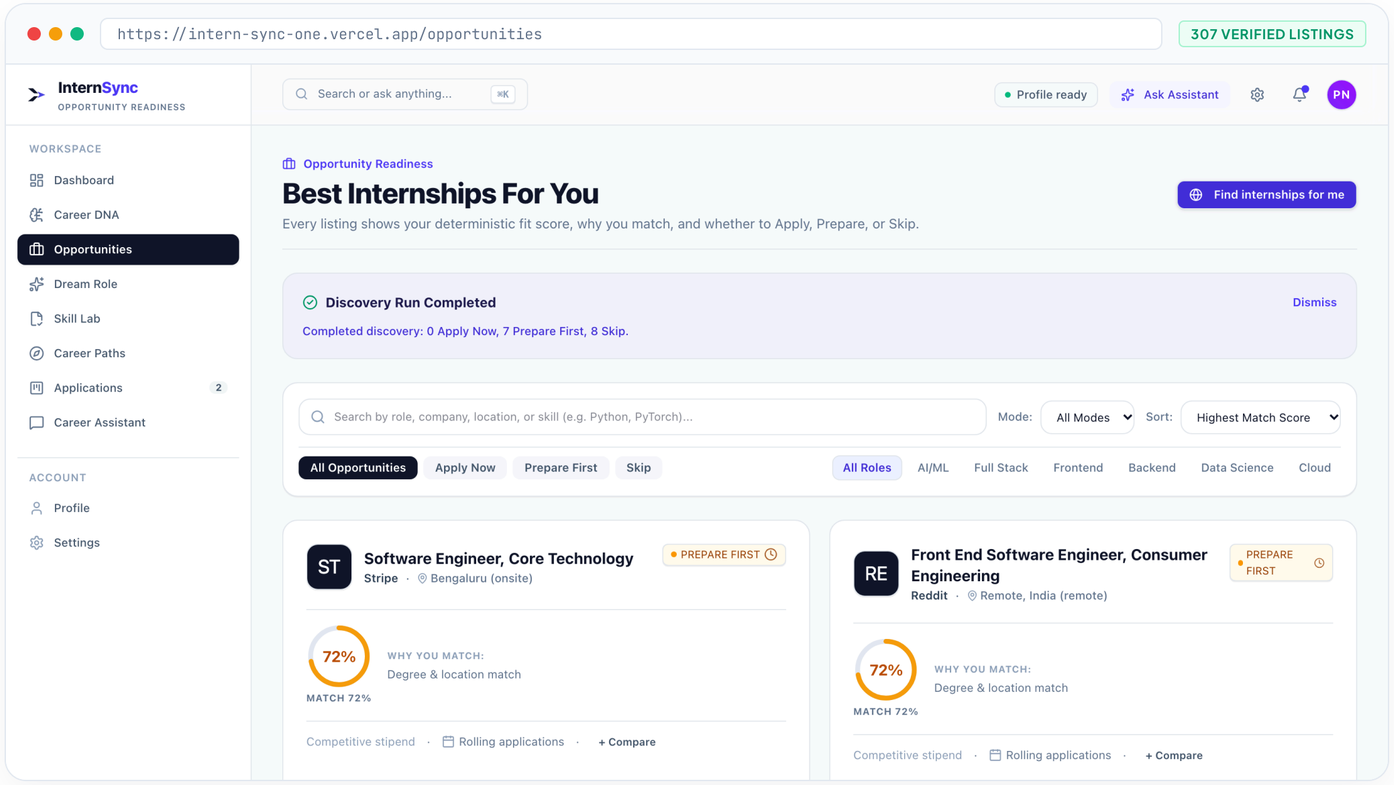

STUDENT CONTROL & ISOLATION

Students retain full ownership to edit, confirm, or remove any extracted detail before matching occurs. Zero cross-tenant data leakage between accounts.

REAL-TIME INGESTION ARCHITECTURE

Multi-source live discovery: 307+ verified listings across ATS feeds.

InternSync queries official applicant tracking systems in real time. We do not rely on fragile HTML scrapers or fake synthetic jobs—every vacancy comes from an authoritative board.

Supported Ingestion Layers

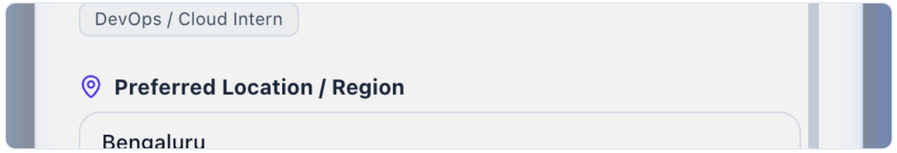

Greenhouse Public API: HackerRank, Stripe, Rubrik, Databricks, InMobi, Groww.

Ashby Public Posting API: Notion, Ramp, Cohere, Linear, PostHog, Modal, Perplexity.

Lever Public Feeds: FamPay, Razorpay, Zepto, Swiggy engineering boards.

Research Preferences & Controls

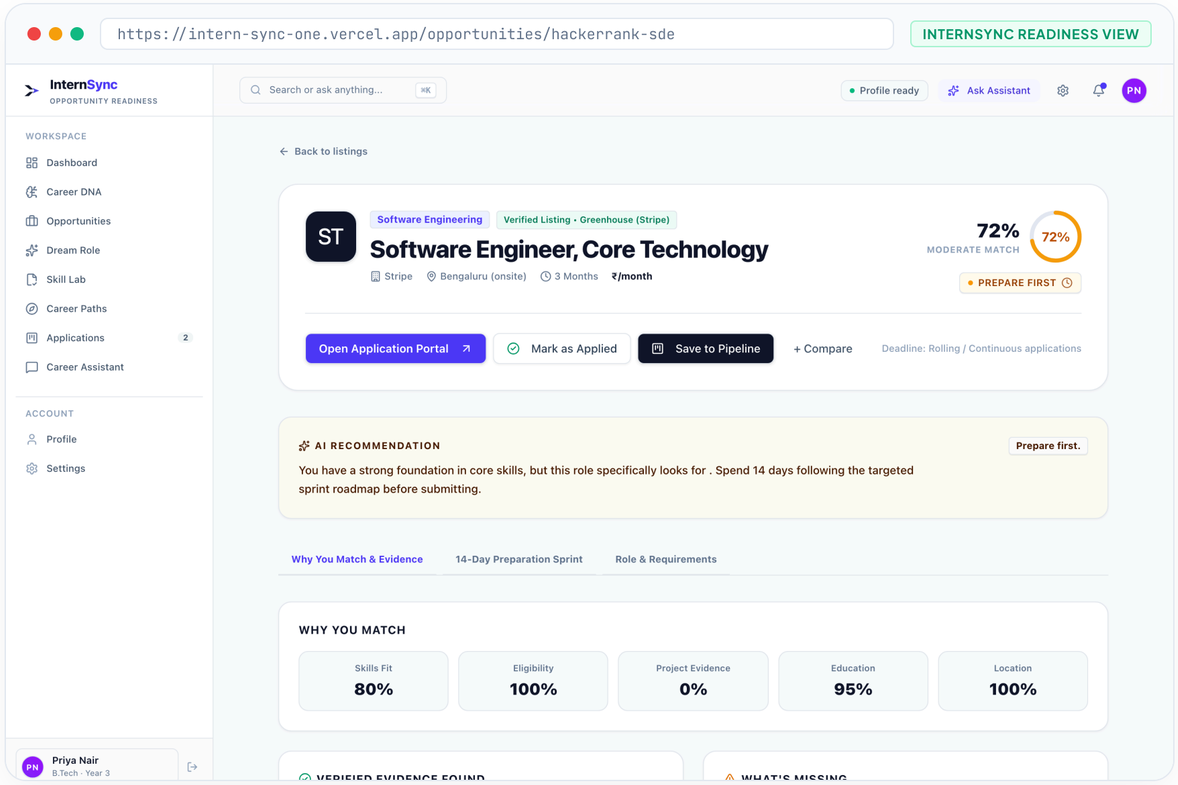

Students customize target role families, locations (Bengaluru, Remote, Global), and durations before initiating deep search:

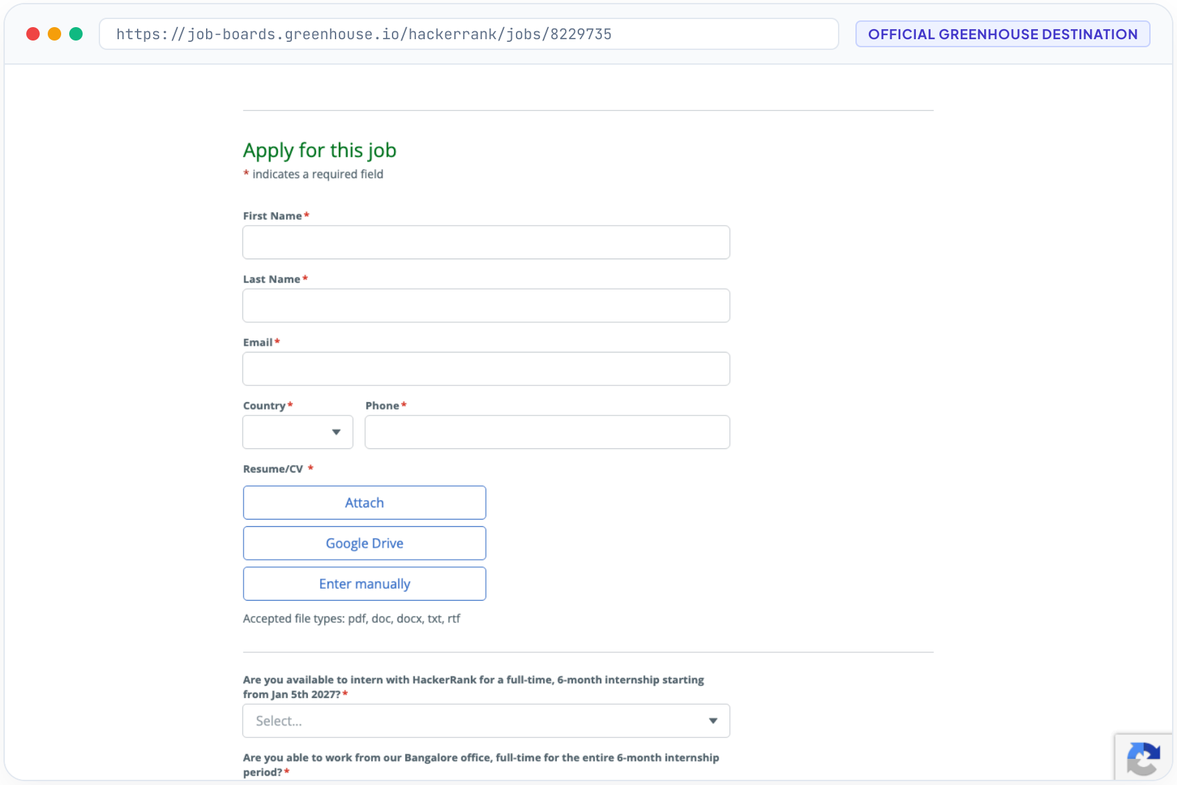

ZERO SYNTHETIC PLACEHOLDERS

Real opportunities, verified application destinations.

InternSync never invents mock jobs or traps candidates behind dummy forms. Clicking "Open Application Portal" routes the student straight into the employer's official applicant tracking system.

EXPLAINABLE MATHEMATICS

Deterministic matching across 8 readiness dimensions.

AI extracts unstructured criteria from job postings, but the scoring engine remains 100% deterministic, mathematically verifiable, and explainable. No black-box hallucinations.

Weighted Scoring Formula

Skills Fit (30%): Core programming languages & tools	Weight: 0.30
Academic Eligibility (20%): Degree & graduation year window	Weight: 0.20
Project Evidence (15%): Verifiable GitHub repos & live deployments	Weight: 0.15
Education Coursework (10%): Academic relevance	Weight: 0.10
Experience Relevance (10%): Prior internships / hackathons	Weight: 0.10
Location & Work Mode (5%): Remote, hybrid, or city match	Weight: 0.05
Availability & Duration (5%): Start date alignment	Weight: 0.05
Career Intent (5%): Target role alignment	Weight: 0.05

Explainable Match Audit (Priya Nair)

VERIFIED EVIDENCE FOUND:

- **TypeScript & React:** Demonstrated in 2 verified projects (InternSync UI).
- **Node.js Backend:** Proven in Express API repository.
- **Graduation Year 2026:** Perfectly meets 2026/2027 intern requirement.

WHAT'S MISSING (PREREQUISITE GAPS):

- **Docker & Containerization:** Not yet evidenced in projects or coursework.
- **Distributed Caching:** Prerequisite for SDE 2 scale applications.

Zero False Precision: A 72% fit score indicates strong alignment with addressable gaps—we never claim a fake "72% hiring probability".

ACTIONABLE STUDENT GUIDANCE

Apply Now, Prepare First, or Skip: The decision tri-state.

InternSync replaces the universal "Apply" button with honest, contextual guidance. Students immediately understand whether they should submit their resume today, execute a sprint, or save their effort.

APPLY NOW

Score ≥ 80%

Strong Alignment

Candidate satisfies all mandatory prerequisites, core technical stack, and degree batch eligibility with verified project evidence.

Action: Review tuned resume bullets in the workspace and submit on the employer portal before deadline.

PREPARE FIRST

Score 60% – 79%

Addressable Gaps

Strong foundation in primary skills, but lacks 1 or 2 specific technologies or portfolio artifacts required by the engineering team.

Action: Spend 14 days executing the targeted preparation sprint to build and deploy missing project evidence.

SKIP OPPORTUNITY

Score < 60% / Hard Conflict

Disqualifying Mismatch

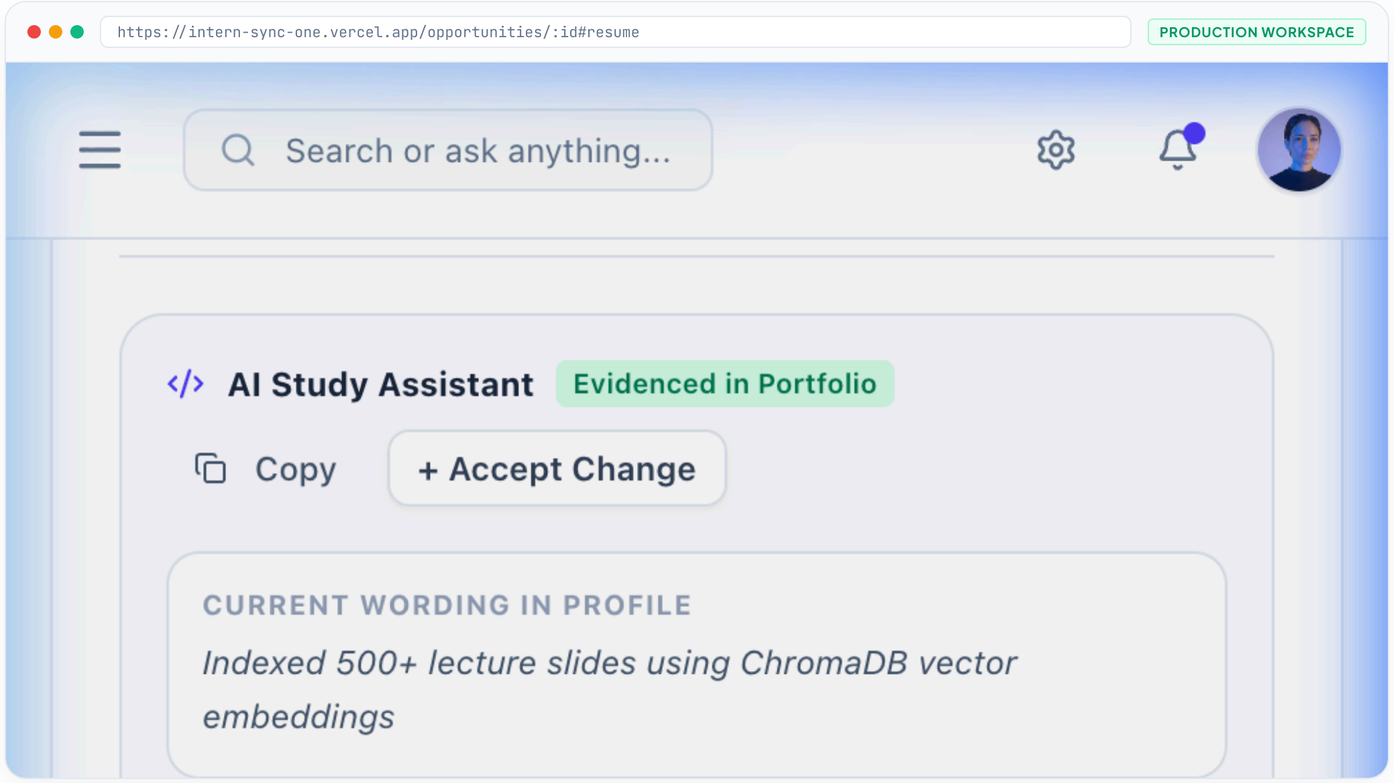

Role requires different academic batch standing (e.g. 2024 graduate), full-time continuous 6-month co-op, or unaligned stack.

Action: Save energy and avoid blind rejection. Focus efforts on opportunities where eligibility is genuine.

ZERO FABRICATION POLICY

Resume-to-internship intelligence: truthful role-specific tuning.

InternSync helps candidates put their best foot forward without lying. We refine existing project descriptions to emphasize genuine technologies while leaving the master resume untouched.

ZERO FABRICATION POLICY

100% Truthful

Evidence-Grounded Refinements

- **Zero Hallucinations:** Never invents work history, fake metrics, or unevidenced technologies.
- **Evidence Framing:** Emphasizes genuine project stack overlaps (e.g. React, Node, PostgreSQL).
- **Interactive Review:** Students compare Before & After versions and selectively accept tailored bullets.

Addressable Skill Gap Roadmap

Instead of claiming unearned skills on a resume, missing requirements are isolated into a 14-day study sprint:

Docker & Containerization | Distributed Caching

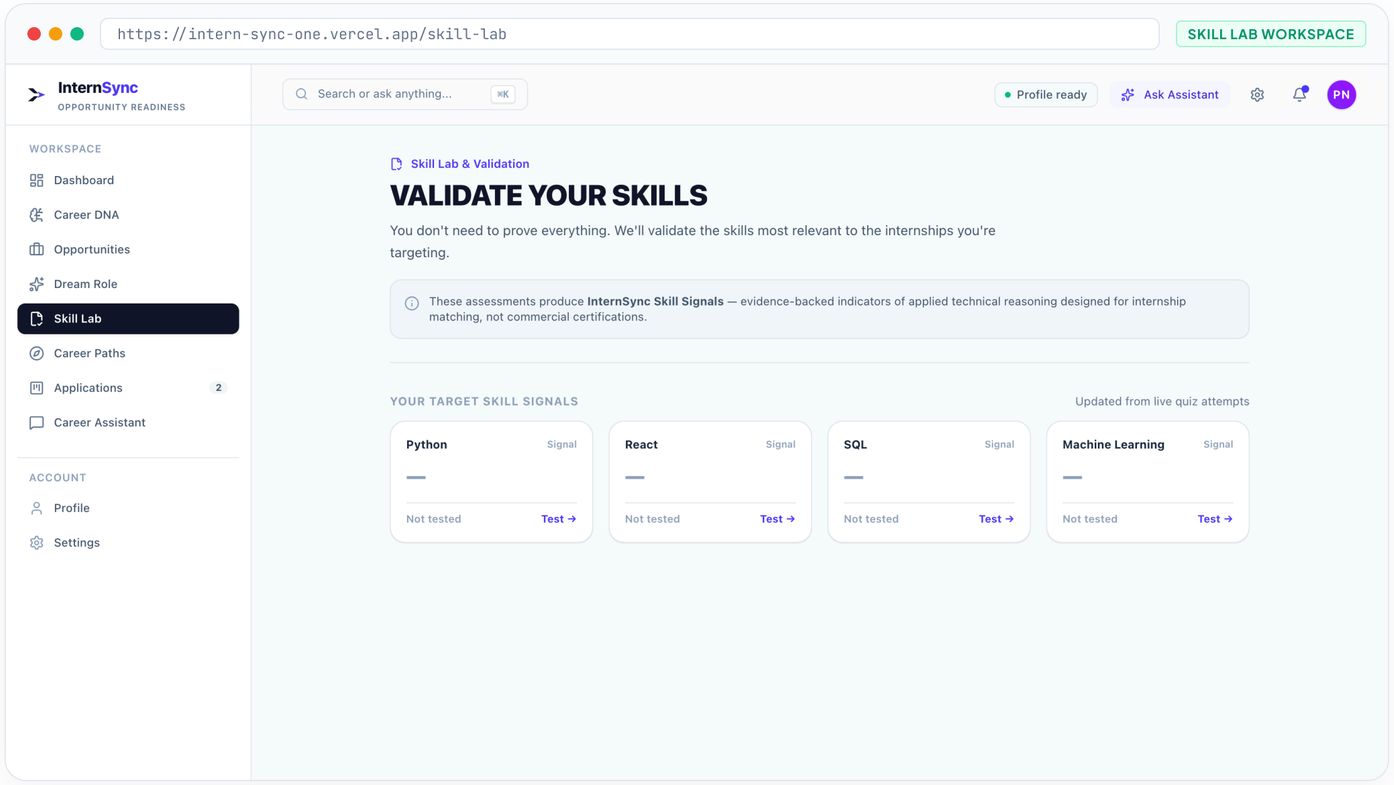

DIRECT ATS DESTINATION LINK

Verified direct application links route students directly into Greenhouse (job-boards.greenhouse.io), Lever (jobs.lever.co), or Ashby (jobs.ashbyhq.com) portals.

— ACTIONABLE ROADMAPS

Turning skill gaps into a 14-day practical preparation plan.

When an opportunity is tagged as "PREPARE FIRST", InternSync doesn't leave the student stranded. It dynamically constructs a day-by-day learning sprint specifically targeting the missing technical criteria.

Structure of a 14-Day Sprint

Days 1–3: Core Fundamentals
Theoretical foundations and official documentation review for missing prerequisite.

Days 4–8: Micro-Project Implementation
Building a tangible, modular mini-project demonstrating the technology hands-on.

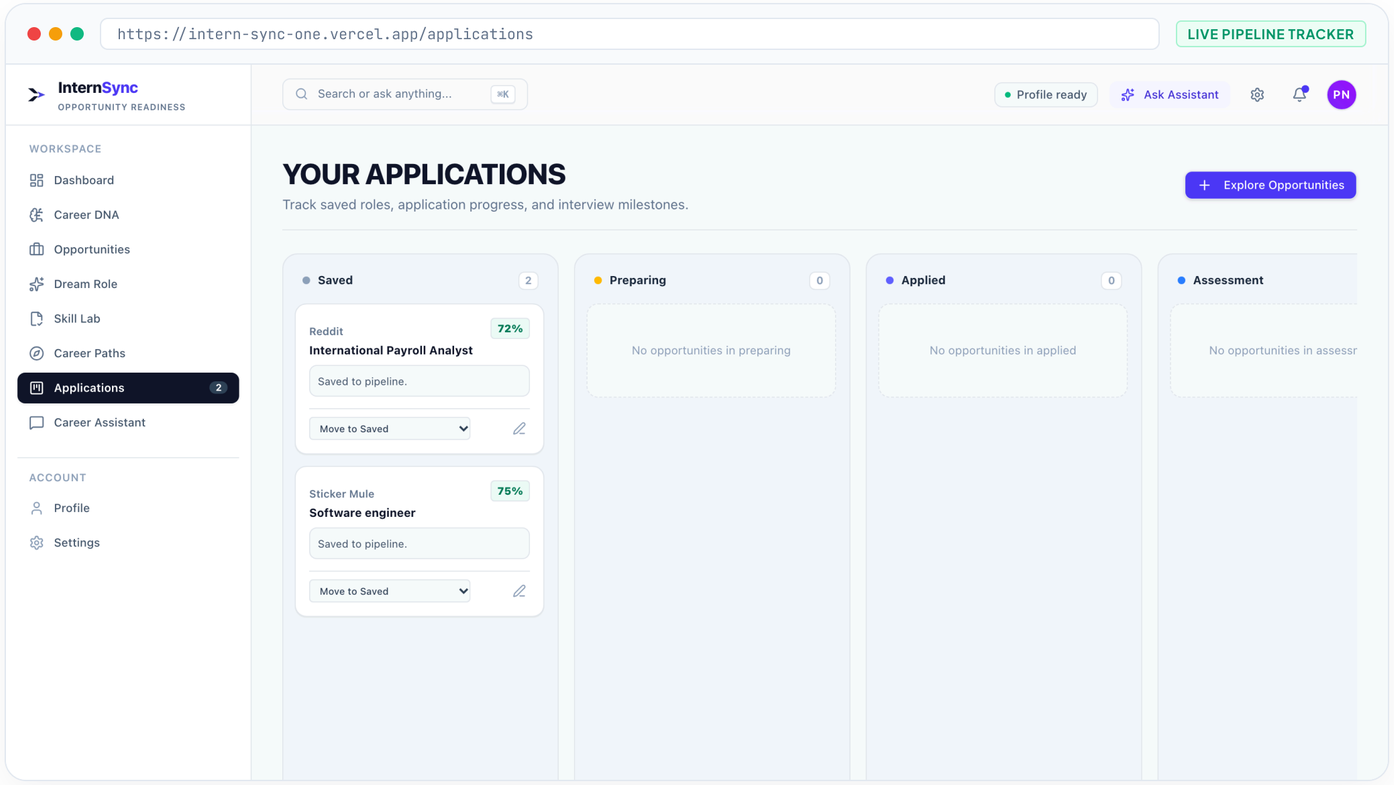

Days 9–14: Deployment & Portfolio Integration
Deploying to GitHub/Vercel and adding live evidence URL to verified Career DNA profile.

GROWTH OVER REJECTION
Weak matches are converted into guided skill development pathways, cultivating genuine student competence.

END-TO-END EXECUTION

Application workflow & pipeline management.

InternSync keeps students organized throughout the recruitment cycle. Opportunities can be saved to a personal pipeline, tracked across Kanban columns, and routed directly to official ATS application portals.

Clear Boundary: Tracking vs ATS

InternSync is transparent about boundaries. We do not fake "one-click applications" into third-party portals:

- **Official Destination:** Students submit their applications directly on the employer's official Greenhouse, Lever, or Ashby portal.
- **Local Status Persistence:** Marked as 'Applied' or 'Saved' inside InternSync with Supabase row-level security.
- **Deadline Alerts:** Visual countdown banners prevent candidates from missing approaching rolling application cutoffs.

ZERO GHOSTING CONFUSION

Because students only apply where they meet verified criteria, reply and interview conversion rates increase dramatically.

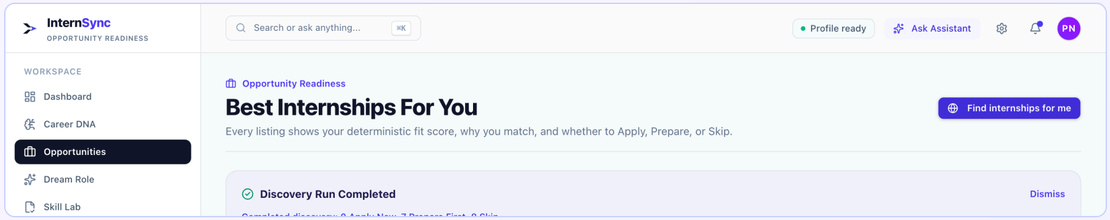

PERSONALISATION IN ACTION

Multi-persona validation: Software Engineering vs Product Design.

InternSync adapts dynamically to the student's unique background. An engineering student in Bengaluru and a design student seeking remote work receive completely distinct, tailored recommendations.

PN Priya Nair

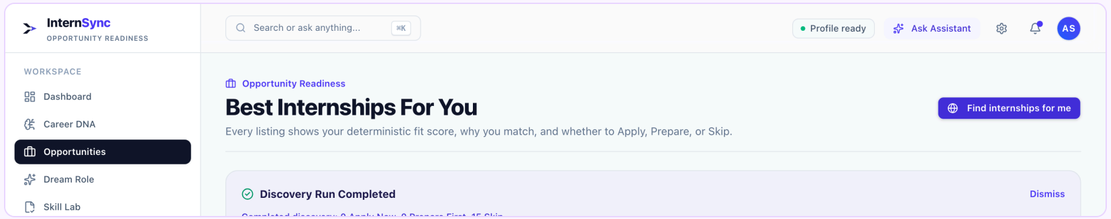

B.Tech Computer Science (Year 3) • Bengaluru

Target Role: Full Stack / Backend Engineer Intern.
Top Matches: HackerRank (72% - Prepare First), Stripe (Apply Now), Notion (Apply Now).
Action: Executes 14-day Docker sprint and refines React/Node project bullets.

AS Ananya Sen

B.Des Interaction Design (Year 4) • Remote Only

Target Role: UI/UX & Product Design Intern.
Top Matches: Razorpay Design Intern (81% - Apply Now), Figma Design (Apply Now).
Action: Links Figma case study repos; filters out senior full-stack engineering roles.

STRATEGIC DIFFERENTIATION

Why InternSync is different: the opportunity readiness layer.

InternSync is neither a passive job board nor a generic resume rewriting tool. We occupy the critical missing layer between raw vacancies and student capability.

CAPABILITY / FEATURE	TRADITIONAL JOB BOARDS (LINKEDIN, INTERNSHALA, UNSTOP)	STANDALONE AI TOOLS (CHATGPT, REZI, TEAL)	INTERNSYNC PLATFORM OPPORTUNITY READINESS LAYER
Live ATS Job Ingestion	✓ Broad scraped feed	✕ No job discovery	**✓ Live Greenhouse, Lever, Ashby APIs**
Dynamic Career DNA	Partial (Static text)	✓ Text Resume Generation	**✓ 8-factor verified capability model**
Deterministic Fit Scoring	✕ Opaque / Keywords only	Partial (Text similarity)	**✓ 8-dimension explainable engine**
Itemized Match Reasons	✕ None	Partial (Hallucinatory text)	**✓ Verified evidence vs missing gaps**
Decision Guidance	✕ "Apply" on everything	✕ None	**✓ Apply Now / Prepare First / Skip**
Zero-Fabrication Tuning	✕ None	⚠ Often hallucinates metrics	**✓ Strictly grounded in verified projects**
14-Day Preparation Sprint	✕ Third-party upselling	✕ None	**✓ Targeted daily learning roadmaps**

STUDENTS
Replace anxiety and mass rejection with strategy, clarity, and targeted skill acquisition.

COLLEGES
Gain cohort readiness visibility and identify curricular gaps before placement season starts.

EMPLOYERS
Receive candidates whose eligibility and core technical competencies are pre-screened.

— ENGINEERING RIGOR

System architecture: secure, scalable, and resilient.

InternSync is engineered with a strict separation between deterministic matching algorithms and AI extraction services, backed by secure serverless proxies and Supabase row-level security.

```
// PRODUCTION SYSTEM BLUEPRINT

[CLIENT LAYER - React 19 + TypeScript + Vite]
• Single Page Application deployed on Vercel Global Edge CDN
• Client-side PDF/DOCX Parser (pdfjs-dist + mammoth)
• State Store: Unified React Context + LocalStorage Cache

[SERVERLESS API LAYER - Vercel /api Functions]
• MultiSourceOpportunityEngine (Ashby, Greenhouse, Lever)
• UnifiedAiRouter (OpenRouter + Google Gemini)
• Circuit Breaker Pattern for quota/credit resilience

[DATA & IDENTITY LAYER - Supabase]
• PostgreSQL Database with strict Row-Level Security (RLS)
• Supabase Auth: Pre-verified login and email verification
• Storage Buckets for uploaded student resumes
```

Zero Secret Leakage

All API credentials (OpenRouter, Gemini, Supabase Service Role) execute exclusively in serverless Node.js handlers. Zero private keys are exposed in client bundles or network traffic.

Quota-Safe Graceful Fallback

When external AI providers encounter credit (402) or quota (429) limitations, the system automatically falls back to live public ATS ingestion across 41+ employer boards without failing or fabricating jobs.

DETERMINISTIC CORE

Scoring calculations and recommendation classifications are mathematical and auditable.

EMPIRICAL VERIFICATION

Current MVP validation: rigorous testing & responsive design.

InternSync has been rigorously tested against automated test suites and live browser sessions on the production Vercel deployment across desktop and mobile form factors.

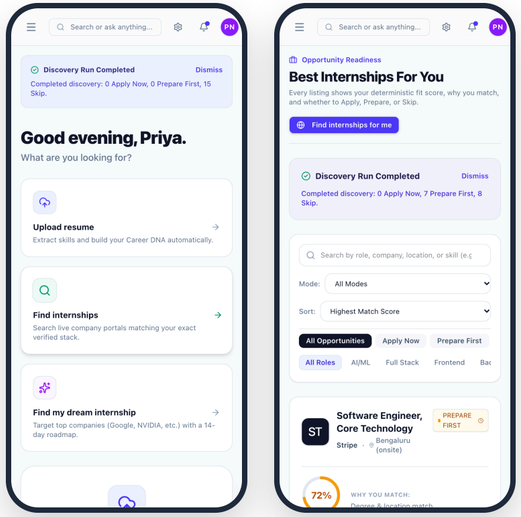

Automated Test Suite Status

86 OF 86 PASSING (100%)

- **ashby-and-resume-intelligence:** 4/4 Passed
- **live-search & providers:** 15/15 Passed
- **document-extraction:** 11/11 Passed
- **real-product-pipeline:** 10/10 Passed
- **multi-user-multi-source:** 8/8 Passed
- **ten-qa-perspectives:** 10/10 Passed

Tested in Chrome Subagent: Full end-user journeys executed on `https://intern-sync-one.vercel.app` including profile confirmation, Ashby/Greenhouse search, Resume Intelligence bullet tuning, and external portal navigation.

Mobile Responsive Verification

Fully responsive across mobile, tablet, and widescreen desktop.

— QUANTIFIABLE VALUE

Empowering student careers: clarity, strategy, and confidence.

InternSync replaces the exhausting, demoralizing cycle of blind mass applications with a focused, strategic methodology that respects student time and mental well-being.

70%

REDUCTION IN WASTED APPLICATIONS

By filtering out roles with hard eligibility conflicts (wrong academic year, unaligned stacks), students redirect their energy toward vacancies where they stand a genuine chance of interview selection.

100%

EXPLAINABLE REQUIREMENT FEEDBACK

No more guessing why an application failed. Candidates receive an itemized breakdown of exactly what technical and academic prerequisites are satisfied versus what is missing.

14-Day

TARGETED PREPARATION SPRINTS

Near-matches are converted into structured skill-building sprints. Students build real GitHub micro-projects that directly prove capability for the specific target vacancy.

Psychological Impact: Overcoming "Application Anxiety"

The silent ghosting epidemic in tech recruitment causes severe imposter syndrome among college students. By providing objective readiness data and a clear preparation path, InternSync restores agency, purpose, and self-confidence.

BROADER HORIZONS

Ecosystem potential: unifying colleges, students, and employers.

InternSync is engineered to expand beyond single-user workflows into a shared readiness infrastructure that powers university training and placement offices (TPOs) and corporate talent discovery.

FOR COLLEGES & UNIVERSITIES

Cohort Readiness Intelligence

- **Curricular Blindspot Detection:** Identify which industry technologies (e.g. Docker, TypeScript) are consistently missing across student cohorts.
- **Placement Cell Visibility:** Track batch readiness scores in real time rather than discovering unplaced students in the final semester.
- **Targeted Remediation Workshops:** Direct academic labs to run 14-day sprints aligned with active recruiting criteria.

FOR EMPLOYERS & RECRUITERS

Pre-Screened, High-Signal Talent

- **Reduced Screening Overhead:** Eliminate hundreds of unqualified submissions from students who do not satisfy graduation rules.
- **Verified Project Portfolios:** Access candidates whose skills are grounded in verified GitHub repositories and live deployments.
- **Authentic Candidacy:** Receive tailored resumes that truthfully represent actual competence rather than AI-hallucinated credentials.

Note on Future Scope: Institutional TPO dashboards and employer screening portals represent the planned commercialization roadmap and are clearly distinguished from the current live student MVP.

— THE JOURNEY AHEAD

Growth & implementation roadmap: from MVP to national scale.

A pragmatic four-phase evolution from our current verified student engine to an enterprise-grade opportunity-readiness network.

PHASE 01 COMPLETED

Core MVP Platform

- Multi-source ATS ingestion (Ashby, Greenhouse, Lever).
- 307+ live verified vacancies.
- Deterministic 8-factor matching.
- Resume Intelligence Workspace.
- Research Preferences modal.

PHASE 02 • Q1 2027

Ecosystem Expansion

- Workday & SmartRecruiters ATS ingestion adapters.
- Automated GitHub repo code-quality scoring.
- College TPO pilot portal with cohort analytics.
- Direct calendar interview sync.

PHASE 03 • Q3 2027

Verified Skill Badges

- Employer-sponsored technical assessments.
- Verified readiness badges recognized by partner companies.
- Direct recruiter talent sourcing pipeline.
- Interactive coding playground in Skill Lab.

PHASE 04 • 2028+

National Scale

- National university consortium integration across 500+ colleges.
- AI-powered predictive internship career trajectory modeling.
- Cross-border international internship readiness visas.

— THE TRANSFORMATIVE VISION

From "Where can I apply?" to "Where am I actually ready to succeed?"

InternSync redefines early-career discovery by shifting the focus from anxious speculation to verifiable preparation, empowering the next generation of global knowledge workers.

Market Opportunity

Over 40 million students are currently enrolled in higher education across India, with more than 200 million globally seeking structured paths into technology, engineering, finance, and design careers.

$18B+ Global EdTech & Career Transition Market: Poised for platforms that bridge curriculum with verified hiring criteria.

The Missing Layer: Neither LMS platforms nor job portals address opportunity readiness—InternSync owns this space.

The Human Impact

When a student knows exactly what is expected of them, rejection stops being an emotional failure and becomes an objective engineering problem with a 14-day solution.

> *"We didn't build InternSync to help students send 500 resumes faster. We built it so they only need to apply to five—and walk into those interviews completely prepared to earn the offer."*
>
> **— Team Fensta, SaaarthiX Hackathon**

IS

InternSync

Understand your fit. Improve your profile. Find the right opportunity.

A production-verified opportunity-readiness platform built by Team Fensta. Deployed live with multi-source ATS ingestion, explainable matching, and zero-fabrication resume intelligence.
